IN THE CLAIMS:

Please cancel claims 1-13 without prejudice or disclaimer.

Please add claims 14-29 as follows:

--14. A priming device for a detonator, comprising:

timing means for timing the action of a firing element of a primer; and an electrical power supply that provides a first power intensity to the timing means and power generating means, the power generating means capable of generating a second power intensity sufficient to actuate the firing element upon expiration of a timing interval as determined by the timing means, and the first power intensity from the power supply is not sufficient to actuate the firing element.--

--15. The device of claim 14, wherein the power generating means comprises a capacitor, switching means, and controlling means, the controlling means controlling the switching means by allowing the capacitor to be charged for a charging time and then discharged, the discharge causing the firing element to act on the primer.--
